Unreal Tournament '99 Unofficial Multi Core Fix

This unofficial fix will add 3 new files to UT\System folder and special shortcut to your desktop. Nothing is overwritten or replaced.

Files added:

Process.exe

UT99.ico

UT99MultiCoreFix.bat

Process.exe is freeware by Beyond Logic @ <http://www.beyondlogic.org>

More information on the process.exe file can be found here:

<http://www.beyondlogic.org/solutions/processutil/processutil.htm>

UT99 icon by 3xhuned

UT99MultiCoreFix.bat by hip63

UT99MultiCoreFix.bat launches Unreal Tournament and then launches process.exe to set processor affinity for Unreal Tournament to one processor to correct performance issues when running the game on Multi-Core systems. A shortcut to this file will be placed on your desktop and in the UT Start Menu Group.

Tested with original CD retail version of UT99 patched to 436 on Vista 64-bit.

It should work on the GOG.com version with no problems, just be sure to install to your UT main folder.

For Free Distribution Only!

Use this unofficial fix at your own risk!

Uninstaller included.
